AJITH ONTELA

JAVA BACKEND DEVELOPER | JAVA DEVELOPER | TELECOM OSS

India | +91 7207105472 | ajajith8970@gmail.com | LinkedIn: https://linkedin.com/in/ajith-ontela-22a4a7240

PROFESSIONAL SUMMARY

Java Backend Developer with 2 years of experience at Tech Mahindra, working on Telefónica Germany's MDOI platform across NetSite Federation and NMS Federation applications. Hands-on experience in Core Java, Spring Boot, REST APIs, Kafka, PostgreSQL, Neo4j, Cypher, APOC, Drools, and JUnit. Experienced in implementing business-driven user stories, resolving application defects and Jira tickets, developing and maintaining backend workflows, validating telecom network inventory data, and supporting application deployments across environments. Strong domain exposure to telecom OSS/BSS, Blue Planet, network inventory, federation workflows, and graph-based data processing.

TECHNICAL SKILLS

Core Programming: Core Java, SQL, Python
Backend & APIs: Spring Boot, REST APIs, API Automation, Microservices
Databases: PostgreSQL, Neo4j, Oracle,MySql
Graph & Business Rules: Cypher, APOC, Drools
Messaging: Apache Kafka, Event-Driven Processing
Testing: JUnit, Mockito
DevOps & Tools: Git, GitLab, Docker, Kubernetes, Maven, Linux, Jira
Telecom Domain: OSS, Blue Planet, Network Inventory

PROFESSIONAL EXPERIENCE

Tech Mahindra — Associate Software Engineer | Sep 2024 – Present

Client: Telefónica Germany | Platform: Blue Planet MDOI | Applications: NetSite Federation & NMS Federation

- Contributed to Telefónica Germany's MDOI platform across NetSite Federation and NMS Federation applications, supporting telecom network inventory and OSS workflows within the Blue Planet ecosystem.
- Developed and maintained Java-based backend workflows for processing, validating, and synchronizing telecom network inventory data across application components.
- Implemented REST API-based application automation and backend processing required for assigned user stories and application workflows.
- Implemented assigned business and application user stories by analysing requirements, modifying backend logic, validating changes, and completing the corresponding Jira work items.
- Worked extensively with PostgreSQL for inventory-data validation, SQL analysis, troubleshooting, and application data-processing activities.
- Used Neo4j, Cypher, and APOC to create, update, validate, and troubleshoot graph relationships, including missing, duplicate, and inconsistent network-inventory relationships.
- Modified Drools business rules by adding required attributes and updating source/target relationship logic based on application requirements.
- Worked with Kafka-driven event flows supporting downstream Neo4j processing and application data synchronization.
- Developed JUnit test cases to validate backend functionality and support reliable implementation of application changes and bug fixes.
- Investigated, debugged, and resolved application defects and Jira bug tickets involving backend logic, data processing, and network-inventory relationships.
- Performed application deployments across environments and supported post-deployment validation and issue resolution.
- Collaborated with developers, QA, and project stakeholders to deliver user stories, resolve defects, and maintain application functionality across NetSite Federation and NMS Federation.

EDUCATION

Bachelor of Technology (B.Tech) – Electronics and Communication Engineering | Siddhartha Institute of Science and Technology | 2020 – 2024

CERTIFICATIONS & ACHIEVEMENTS

- AWS Certified Cloud Practitioner
- Microsoft Power BI
- SQL Intermediate – HackerRank
